

## A new word in online gambling – sports betting on the EOS blockchain

Bet on your favorite sports without lengthy registration, additional risks and problematic withdrawals.

Avoid detailed KYC verification with document scans and card photos.

Stay anonymous, make your bets and get your winnings directly to the EOS wallet.

### Traditional Online Sportsbook

- ✗ Time-consuming KYC
- ✗ Registration required
- ✗ Deposit needed
- ✗ Money kept on the company's account

### EOS Blockchain Sportsbook

- ✓ No deposits – you risk with your bet only
- ✓ No registration
- ✓ Winnings are paid directly to your wallet
- ✓ Anonymity

## What We Offer

Online gambling has been on the rise lately, and the interest doesn't seem to reduce in the nearest future.

Not least due to the blockchain expansion - new possibilities are added, old issues are solved. Online casinos built on the EOS blockchain offer improved customer experience which traditional gambling websites cannot afford.

On the classic online sportsbook, you have to provide a bunch of documents, verify your identity and make a deposit before you make your bet. Your funds are kept on the company's account, and there's no guarantee that you'll see your money at the end of the day. More than that, any authority could request the information about your identity, your bets and earnings within the gambling website. The game is not worth trouble.

The blockchain sportsbook means anonymity and instant payouts to the EOS wallet. SportBet doesn't ask you to submit documents or even register – blockchain ensures anonymity and transparency. We won't block your money because of the unpassed KYC – we don't have it on our platform. More than that, we offer you to share SportBet earnings. Our investors will be able to earn dividends by staking SBET tokens.
